Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Walkowe (US 5,553,514).

Walkowe discloses a device for reducing noise in a system, wherein the noise is associated with a rotating member integral to the system, the device comprising: at least two (21,25) masses coaxially disposed adjacent to a rotating member (12); a drive means (11,23) interconnected to each mass for selectively rotating the mass relative to and in the same direction as the rotating member (col. 6 lines 35-59); and a control means (16) for sending a signal to the drive means such that the angular velocity of at least one of the masses is altered, the drive means causes at least one of the masses to rotate in a direction opposite to the direction of rotation of the rotating member (col. 5 lines 30-50), the drive means causes at least one of the masses to rotate at a higher velocity than the rotating member (col. 6 lines 50-59), the control means utilizes a phase angle from a power source as phase angle reference (col. 5 lines 5-14), the control means utilizes sensors mounted on a system interconnected to the rotating member to provide feedback signals for controlling at least one of the drive means (col. 4 lines 39-61).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
